PROJECTS

Realty Website— https://whispering-oasis-62709.herokuapp.com/

Full stack website built for a mock real estate team based in the Colorado area. Created using HTML 5, CSS 3, JQuery, Node JS, EJS, and MongoDB. This project was one of my first experiences creating a CRUD application. It was most challenging to create the edit routes.

Art Portfolio — https://powerful-lowlands-15167.herokuapp.com/

Full stack website for a mock photographer - built using HTML 5, CSS 3, JQuery, Node JS, EJS, MongoDB, and Semantic UI. There was a snag when working on the pagination and lazy loading portions of this project. The Semantic UIs lazy loading example was used to figure out how to apply it to this project and lots of googling to work out the pagination.

Thai Kitchen—https://still-inlet-43499.herokuapp.com/

Front end project built for a local restaurant- this website was created using HTML 5, CSS 3, and JQuery. Nothing fancy here! It was challenging creating a layout for the menu that will appear clean and legible on different devices. It was decided to create the layout using flexbox to make it easier when working on the responsive design.

Mint Condition —https://thawing-savannah-84432.herokuapp.com/

Front end project built for a local tattoo shop - this website was created using HTML 5, CSS 3, and JQuery. Nothing fancy – It was difficult to create a clean one page layout for this project without it feeling too crowded. Flexbox was used for most of the layout as it is easier to create a responsive design this way.

EXPERIENCE

Hart Appraisals, Pomona, CA — *Owner/Residential Appraiser*
